Website Investigation Report

Tech Asset Recovery • techassetrecovery.net

ASSESSMENT	**High risk — verification required**
Marketplace fit	Potentially relevant IT hardware supplier
Recommended decision	Hold. Do not approve as a verified supplier yet.

1. Overview

The website presents Tech Asset Recovery as a US-based supplier of bulk IT hardware. The email offered Cisco networking equipment, Dell and Samsung enterprise storage, Western Digital hard drives, and NVIDIA GPUs. This product mix is relevant to a surplus marketplace, but the email and website alone do not prove that the seller owns the stock or can deliver it.

Website: https://techassetrecovery.net/ **Reputation check:** https://www.scamadviser.com/check-website/techassetrecovery.net

2. Domain and website information

Field	Reported finding
Domain	techassetrecovery.net
Registration date	27 March 2026
Approximate domain age	About 6½ months as of 12 October 2026
Registrar	NameSilo, LLC
Infrastructure	Cloudflare infrastructure reported
Domain owner	Registration details reported as privacy-protected
HTTPS	A valid certificate was reported by analysis sources

Interpretation: the domain is relatively new. Privacy-protected registration and use of Cloudflare are not proof of wrongdoing, but the website has limited public history from which to establish a business reputation.

3. Website reputation and security reports

Source	Reported result	Interpretation
ScamAdviser	Very low trust score; reported score of 0 in the checked report	Flags include recent registration, hidden ownership and limited traffic. A reputation score is a signal, not proof of fraud.
Gridinsoft	29/100 reported in a July 2026 assessment	The report cited security/reputation concerns and limited independent reputation data. Automated classifications can be wrong.

Reports to review:

ScamAdviser: open report
Gridinsoft: open report

4. Business identity and contact details

Field	Information provided	Verification status
Address	6001 Jaguar Dr, Santa Fe, NM 87507, USA	Not independently confirmed
Phone	+1 (505) 336-3489	Not independently confirmed
Website email	info@techassetrecovery.net (website-listed)	Not independently confirmed
Email sender	oecdmoore@gmail.com	Gmail sender; relationship to company unverified
Email signature	sales@techassetrecovery.net	Domain email listed in signature

The difference between the Gmail sender and the company-domain email is a verification point, not conclusive evidence of fraud. The address, phone number and website claims have not been independently confirmed as belonging to a registered business or a warehouse holding the listed stock.

5. Inventory and commercial considerations

The offered categories include Cisco switches/transceivers, Dell EMC SSDs and hard drives, Western Digital HDDs, Samsung enterprise SSDs, and NVIDIA GeForce RTX 4090 GPUs. These categories could be commercially relevant to Surplus Here.

However, the email does not include adequate evidence of ownership or availability, such as serial-number lists, timestamped stock photographs, test reports, purchase invoices, a clear shipping quote, or customer references. Some quantity and price entries are also ambiguous, including the Samsung PM893 3.84TB entry.

6. Information that remains unverified

• Whether Tech Asset Recovery is a legally registered US business.

• Whether Fred Willy is authorized to represent the business.

• Whether the company owns the advertised inventory and can fulfil the stated quantities.

• Whether the prices are current and the stock is available for immediate shipment.

• Whether prior customers have received orders successfully.

7. Recommended due-diligence steps

1. Verify legal identity: Request the exact legal entity name, state registration details, tax ID where applicable, and independently verify them through official sources.

2. Verify physical operation: Confirm the address and warehouse independently; do not rely only on contact information supplied in the email.

3. Verify stock: Request dated photographs, a live video inspection, serial-number samples, condition/test reports and a complete inventory manifest.

4. Verify track record: Ask for trade references and independently contact previous buyers or business partners.

5. Verify transaction terms: Obtain a formal quotation, Incoterms/shipping details, warranty/return terms and payment terms. Avoid advance payment until checks are satisfactory.

6. Protect marketplace users: Do not publish the stock as verified or represent it as confirmed inventory until verification is complete.

8. Final recommendation

Decision: HOLD — HIGH RISK / VERIFICATION REQUIRED

The supplier's product category fits the marketplace, but the relatively new domain and negative reputation reports justify caution. Available information is not enough to conclude that the business is fraudulent, nor is it enough to approve the supplier as legitimate.

Suggested CRM status: Supplier Lead → Verification Required → High Risk

Sources and limitations

Website: techassetrecovery.net
ScamAdviser: domain reputation report
Gridinsoft: website security report

This report summarizes public website/reputation signals and details supplied in the email. Third-party scores may be automated, may change over time, and are not proof of fraud. No independent legal-registration check, warehouse inspection, stock audit or transaction test is represented as completed.
